

## FIX and Binary User Types

Users can access LMEselect 10 by connecting to a third party application or LMEselect FIX or Binary API.

Members can request LMEselect 10 accounts for their users by submitting a user form for LMEselect 10 to the Trading Operations team ([tradingoperations@lme.com](mailto:tradingoperations@lme.com)).

Note the short code refers to the code in the user form.

Short Code	User Type	Description
FT	FIX Trader	Uses a third party ISV application or API to the LMEselect FIX API for order routing and trading.
FL	FIX LMEtrader	LMEtrader requires at least one FIX LMEtrader connection to enable order routing between the LMEtrader account hierarchy and the LMEselect FIX API.
DC	FIX Drop Copy	Receives order and trade data for monitored entities.  All Members have a 'default' Member Group to which all trading sessions (both FIX and Binary) are automatically allocated. Additional Member Groups can be established to facilitate specific drop copy feeds directly to a client. Trading sessions can be assigned to more than 1 Member Group.
RM	FIX PTRM	Uses a third party ISV application to connect to the LMEselect PTRM API to maintain risk limits, risk groups and end clients related to the Member and their related entities.
BT	Binary Trader	Uses a third party ISV application to connect to the LMEselect Binary API for order routing and trading.
